

Premium range of new CMP antifouling

CMP R&D program x New biocide technology

A new antifouling patented by CMP is including a unique biocidal agent; Selektope® from I-TECH AB, is proving to be spectacularly effective in prevention of barnacle attachment and is confirming itself to be capable of delivering unsurpassed antifouling performance even when a ship has a long layup at anchorage or a long static period during trading i.e. for a few months. Hence the new antifouling is ideal to meet today's demands and challenges from a market suffering from ship's frequent off hire time or very low activity.

Ongoing monitoring and evaluation of antifouling performing on ships with the new products:

1 year performance after long anchorage (in Tokyo bay)

New products line-up

SEAFLO NEO CF-PREMIUM

SEAFLO NEO S-PREMIUM

SEAFLO NEO CFZ (*)

(*) SEAFLO NEO CF Z includes a new biocide technology in the product ECONEA® (by Janssen PMP).
